Individual Activity4: "Design Your Own System Using UML"

Part 1: System Idea & Recall

1. **4 UML Diagrams and description**

    1. **Use Case Diagram**
        - A Use Case Diagram shows the users (actors) of the system and the actions they can perform. It helps identify the main functions of the system.
    2. **Class Diagram**
        - A Class Diagram shows the structure of the system by displaying classes, attributes, methods, and relationships between objects.
    3. **Activity Diagram**
        - An Activity Diagram illustrates the step-by-step workflow or process inside the system. It is similar to a flowchart.
    4. **Sequence Diagram**
        - A Sequence Diagram shows how objects interact with each other in a sequence over time. It helps visualize communication between parts of the system.

2. System Idea

System Title

LearnLink: Online Tutoring and Learning Platform

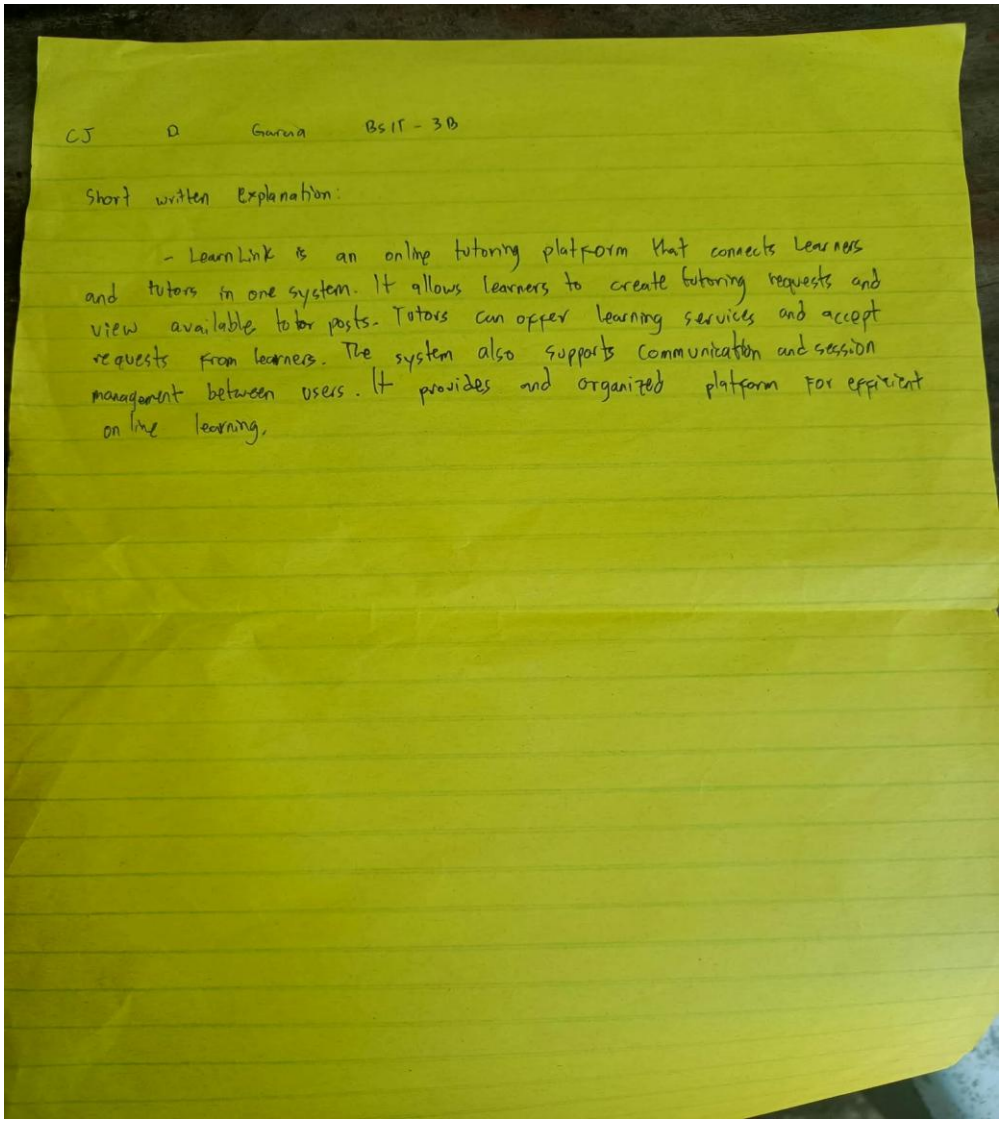
Short Description

LearnLink is an online tutoring platform designed to connect learners and tutors in one system. Learners can create tutoring requests, while tutors can offer learning services and communicate with learners through the platform. The system also allows users to manage posts, transactions, and learning sessions. LearnLink aims to provide a convenient and organized environment for online learning and tutoring.

Main Features

- User Registration and Login
- Create and Manage Tutoring Posts
- Submit Tutoring Requests
- Messaging and Communication
- Session and Transaction Management

Short Written Explanation



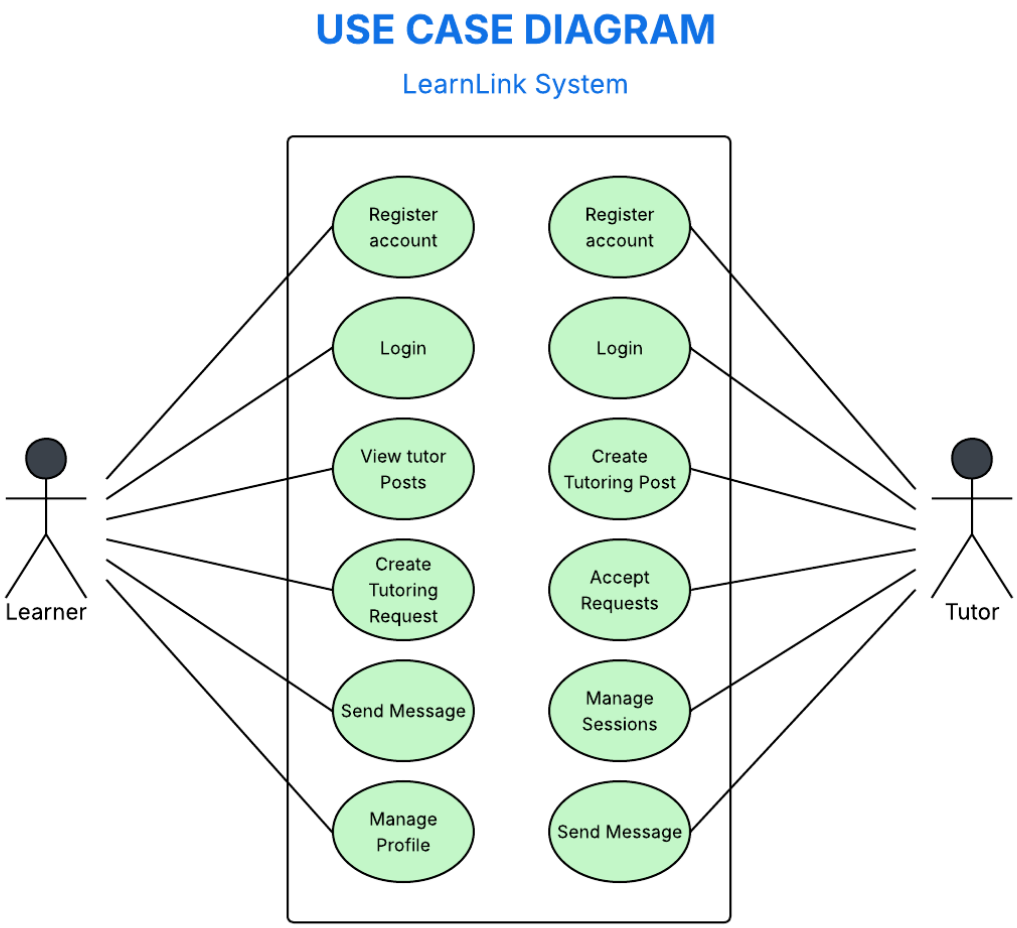
CJ D Garna BSIT - 3B

Short written explanation:

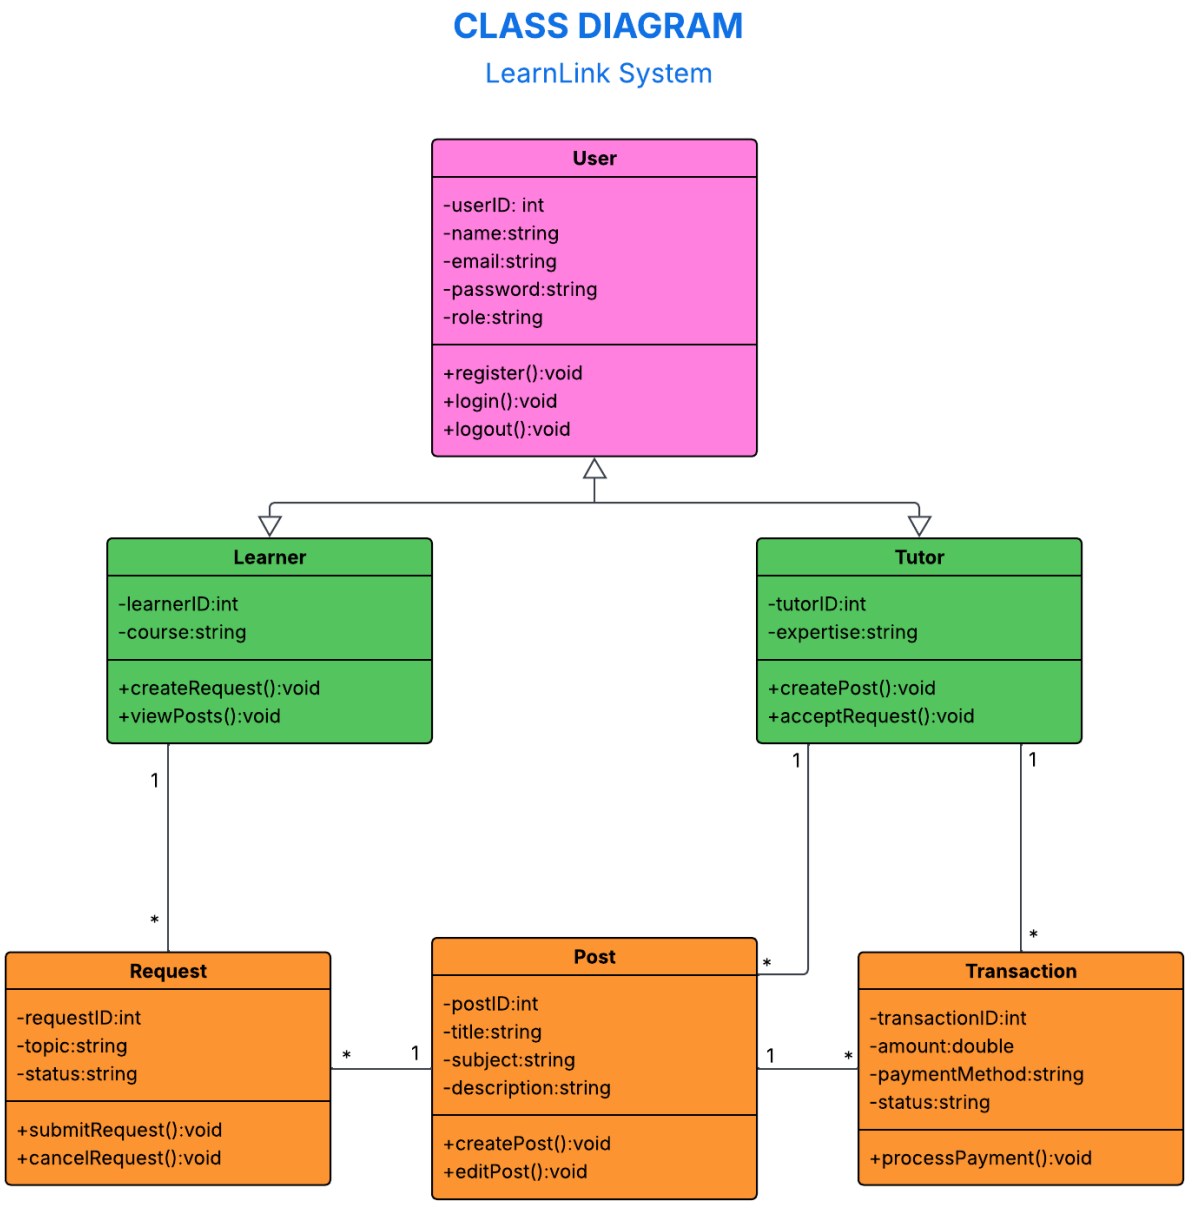
- LearnLink is an online tutoring platform that connects Learners and tutors in one system. It allows learners to create tutoring requests and view available tutor posts. Tutors can offer learning services and accept requests from learners. The system also supports communication and session management between users. It provides and organized platform for efficient on line learning.

Part 2: UML Diagram Creation

1. **Use Case Diagram**



2. Class Diagram



Part 3: SDLC Application

1. **Planning**
   - In the planning phase, I identified the need for a system that can help learners and tutors connect online more easily. I decided to create LearnLink to make tutoring sessions and learning requests more organized and convenient.
2. **Design**
   - In the design phase, I created UML diagrams such as the Use Case Diagram and Class Diagram to visualize the structure and functions of the system before development.
3. **Implementation**
   - In the implementation phase, the system would be developed using programming languages, databases, and frameworks to turn the design into a working application.
4. **Testing**
   - In the testing phase, the system would be checked to make sure the features work properly, such as login, posting, messaging, and managing tutoring requests.

Part 4: Reflection

1. **What did you learn from creating UML diagrams?**
   - I learned that UML diagrams help developers understand and organize a system before coding. They also make it easier to visualize how users and system components interact.
2. **Why is planning (SDLC) important before building a system?**
   - Planning is important because it helps identify system requirements, avoid errors, and organize the development process properly before implementation begins.
